

RESEARCH SHOWS THAT HOME EDUCATION WORKS

Research has shown that home educated children flourish both educationally and socially with one-to-one support for their learning and personal development outside the school system.

<http://www.dur.ac.uk/p.j.rothermel/Research/ESRC/PipsBaseline.htm>

“Whilst the home-educated children outscored their school counterparts, those from lower socio-economic groups outperformed their middle class peers. It appeared that a flexible approach to education, and a high level of parental attention and commitment, regardless of their socio-economic group and level of education, seemed the most important factors in the children's development and progress.”

Cambridge University Primary Review February 2008 Primary Futures . This academic report considers the evidence base for educational alternatives. “Studies of home schooled children show clear and substantial evidence of high (and above average) performance. “ “One constant in the midst of much complexity is the better than average performance of home schooled children when compared to age cohorts in the general population. “
